

actly alike. The child of the millionaire and of the pauper must have exactly the same advantage. The first person who is fool enough to insinuate that this service is free to the children of the indigent ONLY, should be

barred from any further part in the undertaking. The most serious mistake that has ever been made, or that ever could be made, is attempting to classify people, especially North Carolina people, into rich and poor.

FUTURE WORK

It is the intention of the Bureau of Medical Inspection of Schools to extend this service during the present year to reach many thousands of school children.

The experience of the past year will be utilized to great advantage; and it is earnestly hoped that all local agencies, welfare boards, red cross, health officers, county and city boards of health, physicians, dentists, boards of education, women's clubs, and any and all authorities, will cooperate with this bureau in the conduct of this important work.

The Bureau of Medical Inspection of Schools of the North Carolina State Board of Health has one axe to grind, and only one, one hobby, one obsession, and that is that every defective child within the boundaries of the State shall be given the treatment necessary for physical development. In unity there is strength, in cooperation there is power, in system there will be results. Otherwise our efforts will be sporadic, and eventually enveloped in failure.
